

THE RESCUE DEVICE YOU DIDN'T KNOW YOU NEEDED!

OSHA estimates that pallet rack collapses in the United States cause **\$36 billion in annual costs**. This figure includes the cost of repairing or replacing damaged racks, inventory and equipment, as well as lost productivity, business interruption, legal claims, and reputational damage.

A pallet rack collapse is a rare **but deadly** event in which a damaged frame ignites a chain reaction that leaves a tangled web of steel components woven into the wreckage from all the pallets of goods which they were previously holding. The aftermath of such an event is at a scale that is hard to imagine – **and impossible to precisely train for**.

Should victims be trapped in this destruction, the clock is ticking to safely carve a path to them. To make matters even worse, the shoring strut that rescue teams would instinctively reach for is **not compatible with pallet rack frames**.

SO, WHAT NOW!?! You need a safer way to reliably engage these compromised structures. You need **ShoreFit!**

ShoreFit is the **patent-pending** rescue solution that establishes a sturdy, secure, multi-plane connection for shoring strut engagement with pallet rack frames. Developed by experts with decades of experience in warehouse safety innovations, pallet rack maintenance and collapse prevention, **ShoreFit** has been painstakingly engineered to work with major shoring strut brands.

**Everything needed to create
a secure entry triangle for
pallet rack collapse rescue!**

- **No Tools Required!**
- **Easy 3-Step Assembly Instructions Included on Case**
- **Deploy with Your Gloves on in Minutes!**

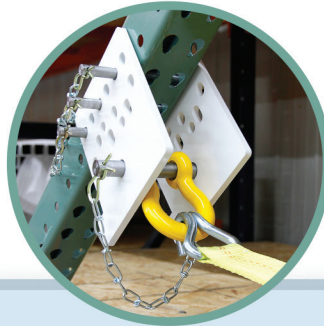

UNDER THE HOOD...

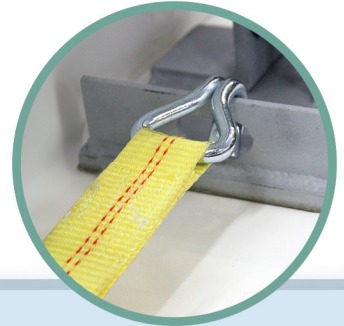

Inside is everything needed to establish a secure connection between your shoring strut and a collapsed pallet rack!

UPPER RACK CONNECTION

LOWER RACK CONNECTION

STRUT BASE CONNECTION

ON THE SHELF!

Despite more than a million warehouses in the U.S. with a combined floor space exceeding 21 billion square feet, and many operating 24/7, **most first responders don't know how unprepared they truly are** for a collapse event, or how to safely and quickly reach someone under this unique debris field.

With **ShoreFit** on hand, first responders can be **fully equipped** in advance to respond should the unthinkable happen on their watch.
